LETTER OF TRANSMITTAL

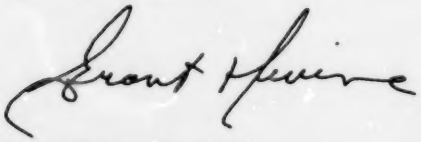
Regina, Saskatchewan
July 20, 1990

To Her Honour
The Honourable Sylvia Fedoruk
Lieutenant Governor of the Province of Saskatchewan

Madam:

I have the honour to submit herewith the Annual Report of the Saskatchewan Agriculture Development Fund for the six-month period October 1, 1989 to March 31, 1990. This report includes financial statements in the form approved by the Treasury Board and duly certified in accordance with The Agriculture Development Fund Act.

I have the honour to be, Madam,
Your obedient servant,



Grant Devine, Premier,
Minister responsible for
Saskatchewan Agriculture Development Fund

MINISTER'S MESSAGE

As Minister responsible for the Saskatchewan Agriculture Development Fund (ADF), I am pleased to present the first annual report for the six month period October 1, 1989 to March 31, 1990.

In 1985 the Government of Saskatchewan announced a commitment to the future of Saskatchewan's agriculture and food industry through the establishment of the ADF. On October 1, 1989 that commitment was renewed through the creation of the Agriculture Development Fund Act. Since its inception, the ADF has approved over 1,300 projects providing farm families and agribusiness with technological tools necessary to build a stronger future.

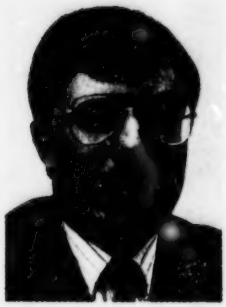
The new act establishes the ADF as a corporate body, allowing it to more efficiently manage joint projects with industry and other government agencies. The act also provides the ADF with the power to administer funds for other organizations.

The ADF is now under the direction of a board of directors made up of members of the agri-food industry, providing greater producer and industry direction. I wish to express my gratitude to the ADF board of directors and the many technical and evaluation committees for their hard work and dedication. I welcome the new members and look forward to your input in the future.

Producers, industry and government must work together to ensure the future of the Saskatchewan agriculture and food industry. I am confident that the ADF will play a vital role in that future.

Grant Devine, Premier,
Minister responsible for
Saskatchewan Agriculture Development Fund

MESSAGE FROM THE BOARD



The six month period following October 1, 1989 has brought new direction to the Agriculture Development Fund. The new board of directors is made up of seven men and women representing a cross-section of the agriculture and food industry from producers to food processors.

During this period we have also witnessed changes within the board itself. Board members who have relinquished their positions include Stuart Garven and the former chairperson, Jack Drew, who has assumed new duties as special advisor on Agricultural Financing to the Premier and Associate Minister of Agriculture and Food. I wish to thank both of these members for their time, effort and leadership in the ADF decision-making process.

The technical review committees consist of members from the board of directors, producers, industry and staff from the University of Saskatchewan, Agriculture Canada and the provincial Departments of Agriculture and Food, Rural Development, and Economic Diversification and Trade. As an integral part of the review and decision making process for project approval, the time and expertise provided by these people is gratefully acknowledged.

Change is inherent in a competitive industry such as agriculture and food. The ADF will continue to take a leading role in developing new technologies to ensure that Saskatchewan's competitive position is maintained.

Stuart Kramer

Stuart Kramer
Chairperson of the Board

ADF BOARD OF DIRECTORS

Mr. Stuart Kramer
Chairperson

Mr. Don Baxter

Dr. Gordon Dorrell

Dr. Wanda Mann

Ms. Julie Paquette

Mr. Brian Petracek

Mr. Richard Richards

How ADF Works

Any individual or organization with an idea that will benefit or be of practical value to Saskatchewan's agri-food industry is invited to submit the idea as a proposal for funding from the ADF. Applicants are encouraged to include private and industry contributions to the project.

When requesting application forms, the nature of the project ... research, development or demonstration ... should be specified.

Applications for research and development projects are processed four times a year, while demonstration applications are processed five times per year.

Regional Technology Transfer Coordinators are available to assist with the demonstration application process. These professionals, located in Moose Jaw, Saskatoon and Prince Albert, serve as the primary contact for the demonstration program.

Once received, all applications are reviewed by an appropriate technical review committee. The committee's recommendations are forwarded to the ADF board of directors, an independent group of producers and agri-business people, who make the final funding decisions.

Successful applicants are then invited to enter into a contract with the Saskatchewan Agriculture Development Fund.

To keep both parties informed of project progress, mutually agreed upon reporting dates are identified for the duration of the contract.

ADF is committed to making project results available to the agriculture and food industries and the general public. Final reports outlining data and results are prepared by each applicant upon completion of the project and are distributed through ADF.

Individuals or organizations interested in applying for ADF funding can pick up application forms at the extension agrologist office in Rural Service Centres, or they can contact:

Saskatchewan Agriculture Development Fund
3085 Albert Street
Regina, Saskatchewan
S4S 0B1
Phone: 787-6566

RESEARCH

Research is a key component of ADF's strategy for economic growth in Saskatchewan. It is also an important part of the effort to make the province's agriculture and food industries more competitive in national and world markets. ADF supports research through a long term strategic research program at the University of Saskatchewan and through many research projects with other participants throughout the province.

The Strategic Research Program (SRP) ensures long term research in strategically important areas. It also supports establishment and maintenance of critical research resources at the University of Saskatchewan.

Project research is usually shorter term and more limited in scope. Many of these projects are co-operative, with support and funding from farm organizations, industry groups and agribusiness.

Research projects investigate a wide range of subjects including farm inputs and production techniques, biological control of weeds and insects, new crop varieties and new products from traditional crops. Three current projects are aimed at developing biological controls for insects and weeds. A fourth involves identifying varieties of Canola resistant to Flea Beetle attack. Expected benefits for producers include reduced cost of pest control and more environmentally compatible control methods.

Other projects underway involve improving market quality of Saskatchewan farm products or creating new market opportunities. One project will test the use of ultrasonics to identify cattle which produce high quality beef. Flour from hull-less barley is being tested as an ingredient in bakery products. A variety of flax which produces edible oil has been identified and is now being improved as a practical farm crop.

Many projects take advantage of new developments in research methods. Biotechnology research is aimed at producing faster, more accurate diagnostic methods to help producers control livestock diseases more effectively. It is also being used to develop plant varieties with greater stress tolerance.

ADF recognizes the importance of research to the strengthening and development of Saskatchewan's economy. It will continue to support vital research and to encourage involvement by co-funders in a coordinated research program that will ensure maximum benefits to Saskatchewan.

DEVELOPMENT

To a large extent, the sustainability of the agricultural industry depends on its ability to adapt to a rapidly changing global environment.

To remain competitive, an industry must be prepared for change and recognize opportunities for development. This belief is the basis for the ADF's funding of projects designed to develop improved products, processes and services that will benefit the future of agriculture in Saskatchewan.

The ADF recognizes the combination of innovation and initiative as the key to improving today's agricultural economy and diversifying Saskatchewan's future opportunities.

In the past six months, the ADF provided funding for a wide variety of development projects throughout the province. These have stimulated marketing and promotion for new products, evaluated the feasibility of new commercial operations and studied new production ideas.

The ADF provided funding for the provincial contribution to the Federal/Provincial Farm Management Initiatives. Under this program, individual projects were approved in areas such as risk management, encouraging crop production clubs and improved management skills for farm women. There were other initiatives in swine management, beef management and in making financial planning software available to producers.

Under the ADF's development component, project funding was also provided for individuals, groups and companies wishing to develop improved products or prototypes or to conduct feasibility studies prior to making decisions on large capital expenditures. New projects were also approved to allow for further development and commercialization of technologies arising from the ADF's research component and to test processes for adding value to the farm commodities produced in Saskatchewan.

Other projects have produced funding to develop business skills for 4-H club members, to determine opportunities for production and marketing of "organic" food products, to investigate the agricultural applications of Geographic Information Systems (GIS) and to initiate the development of a hay certification system for Saskatchewan.

The ADF will continue to support the development of ideas and technologies generated by our agri-food industry, thereby playing a role in keeping Saskatchewan competitive at home and abroad.

DEMONSTRATION

The ADF on-farm demonstration program takes research theories, developed in controlled environments, into the field where practical application results can be measured.

On-farm demonstrations not only help introduce new developments, but they provide farmers with an opportunity to view or have hands-on experience with the latest technological advances.

Bringing new technology to the local level serves two purposes: it provides researchers with an opportunity to evaluate results obtained in actual situations; and, most importantly, it allows producers to evaluate and determine the economic benefits of new varieties, practices or technologies as they apply in their area.

Many demonstrations are joint efforts between the ADF, producer groups, agribusiness and individual farmers. Over the past four years, the ADF's on-farm demonstration projects have been carefully chosen to address current agricultural issues. For example, demonstrations now include new technologies developed outside of Saskatchewan as well as those developed at home. Project managers work with ADF staff and local extension agrologists to ensure that the information received from the demonstrations is made public, so that farmers can learn from each other. Projects, therefore, have to be well-organized and monitored closely.

ADF is providing $19.9 million of a total provincial contribution of $27 million in the Canada-Saskatchewan Agreement on Soil Conservation. This co-operative venture, involving federal and provincial agencies in addition to private organizations, is being implemented through the efforts of 43 district Agriculture, Development and Diversification (ADD) boards across the province.

In the areas of soils and crops, efficient fertilizer applications, production techniques, fertilizer use and soil reclamation methods are being explored throughout the province. The ADF currently funds most of the provincial variety testing, including cereals and oilseeds trials and many smaller industry and locally sponsored demonstrations of new crops.

Other demonstration projects underway include: forage production; evaluation of new types of machinery; organic soil management; organic crop production, biological weed control methods; management of wild and domesticated blueberries, crop rotation practices; and direct seeding versus pre-seeding tillage.

Demonstrations can be initiated by individuals working with their local extension agrologist. In many areas, producers are organizing crop clubs or joining forces with producer and marketing associations to take part in technology transfer seminars. To emphasize the important role such groups can play in technology transfer, the ADF continues to support the demonstration efforts of over 20 crop clubs and producer based associations.

In the areas of livestock and forages, pasture management, livestock production techniques, artificial insemination, disease control, the use of kochia as an alternate feed source and feed ration balancing were

demonstrated at farms throughout Saskatchewan during the past year. Numerous rotational grazing systems were evaluated and methods of pastureland management were demonstrated.

The ADF also supported a project that examined the production and marketing of replacement heifers. In a process similar to bull testing, replacement heifers are tested for rate of growth and reproductive ease. These animals are then marketed as premium replacements to cow calf operators.

The ADF has also established regional technology transfer co-ordinators located in the north, central and south regions of the province, who serve as local co-ordinators for projects designed to bring new technologies to Saskatchewan farms.

During the period October 1, 1989 to March 31, 1990, the ADF has supported more than 250 demonstration projects.

Economic and Regional Development Agreement (ERDA)

Since 1984, Saskatchewan's Agriculture Development Fund (ADF) and Agriculture Canada have funded and administered over 260 research, development and technology transfer projects through a joint commitment to the Subsidiary Agreement on Agricultural Development under the Canada/Saskatchewan Economic and Regional Development Agreement (ERDA).

The five-year ERDA sub-agreement was a major federal/provincial initiative to facilitate joint planning and cooperation in the funding of practical research, development and on-farm demonstration projects. Projects were developed to improve the profitability and future viability of Saskatchewan's most important industry - agriculture.

Projects funded through ERDA helped to improve the productivity and profitability of crop and livestock production; to conserve, enhance and reclaim our soil and water resources; and to help farm families meet today's increasingly complex technical, financial and personal demands.

In addition, there was a major effort to develop new and expanded markets for Saskatchewan products and to develop irrigation systems and soil conservation practices.

Funding under ERDA was provided for project work to be completed prior to March 31, 1990. One of the measures of success of ERDA is that many of the projects begun under ERDA have been continued. New funding has been provided from various sources including ADF, industry and under such agreements as the Canada/Saskatchewan Soil Conservation Agreement.

The ERDA Management Committee has commissioned a final ERDA evaluation. This study will provide a review of administrative aspects of the agreement, an analysis of its impact and recommendations for future co-operative efforts between the federal and provincial governments.

Finance and Administration

ADF Finance and Administration provides high quality client and support services with an emphasis on timely and accurate information delivery.

These services are delivered from the ADF head office in Regina and include financial planning and accounting, office administration, personnel, database administration and administrative and advisory services to agencies such as AgWest Biotech Inc.

Finance and Administration also ensures the availability of project reports through the Communications Branch of Saskatchewan Agriculture and Food. ADF gratefully acknowledges the assistance of Administrative Services Branch, Human Resources Branch and Communications Branch of Saskatchewan Agriculture and Food.

Finance and Administration looks forward to its first full year under the new legal status of the Saskatchewan Agriculture Development Fund and to fulfilling its role of providing clients and staff with support services.

Communications

ADF Communications provides information to two main audiences, the agriculture and food industry and the general public. The section ensures the timely delivery of accurate information on behalf of the Minister and the board of directors.

ADF Communications transfers the results of new technologies to producers and the agri-food industry in a timely and efficient manner so that these industry members may remain competitive in world markets. As well, a variety of methods are utilized to create an awareness of the services which ADF provides to our client group; producers, farm organizations, food industry groups, scientists, researchers, technicians, and agri-food industry representatives.

ADF Communications also strives to inform and educate the general public regarding new and innovative approaches in the agriculture and food industry and create an awareness of ADF's service role to the public at large.

ADF publishes a monthly newsletter, ADF News, which is primarily distributed to rural households. This publication serves to inform the reader about recently completed projects.

ADF also utilizes a variety of print items including brochures on ADF programs and services, project listings, news releases and annual reports.

Project final reports are produced at the completion of an ADF funded project. All applicants must complete a final report of findings, suitable for publishing. Executive summaries or complete copies of

these reports are made available to the public through extension agrologists and offices of ADF. Lists of the project titles, divided into subject areas, are periodically printed in ADF News along with information on how to obtain copies.

Audio-visual presentations are prepared for use by ADF and Rural Development Extension Agrologists. Recent projects included slide tape presentations and a promotional video explaining how the ADF operates. Communications also develops displays and information for use at public exhibitions held across the province.

Research Evaluation and Database Management

The ADF data base now stores information on agriculture and food projects from many provincial agencies and is utilized in co-ordinating projects and avoiding duplication. Electronic dissemination of results from ADF and other agency projects is available.

ADF manages the Saskatchewan Agricultural Services Co-ordinating Committee (SASCC), an advisory body for recommending research priorities and policy options in agriculture and food to the government of Saskatchewan. The number of Saskatchewan councils has been increased to 12 this year with the creation of councils on food production, processing and marketing; animal health and humane care; and by splitting the council on crops into grain crops and forage crops.

Contacts were established with Revenue Canada to provide information on Tax Incentive Programs for Research to ADF clients and with Science and Technology Division of the federal External Affairs Department in order to access new technology for Saskatchewan through their Science and Technology Counsellors located in various parts of the world.

ADF also became a member of the Department of Agriculture and Food's Technology Advisory Committee and Technology Management Committee to help co-ordinate the department's efforts in use of technology.

AUDITORS' REPORT

Saskatoon, Canada
May 24, 1990

To the Members of the Legislative Assembly
Province of Saskatchewan

We have examined the balance sheet of The Agriculture Development Fund as at March 31, 1990 and the statements of revenue and expenditures and operating surplus and changes in cash position for the six (6) month period then ended. Our examination was made in accordance with generally accepted auditing standards, and accordingly included such tests and other procedures as we considered necessary in the circumstances.

In our opinion, these financial statements present fairly the financial position of the Fund as at March 31, 1990 and the results of its operations and the changes in its cash position for the six (6) month period then ended in accordance with generally accepted accounting principles for non-profit organizations as disclosed in note 1 to the financial statements.

Chartered Accountants

Cash held in Consolidated Fund of Saskatchewan at end of period	$ 7,308,672

See accompanying notes to financial statements.

MARCH 31, 1990

1. Significant Accounting Policies

a) Basis of accounting

These financial statements have been prepared on the full accrual basis, reflecting all assets, liabilities, revenue and expenditures in accordance with the accounting policies outlined below.

b) Revenue recognition

i) Projects

Project revenue received is recognized in the period that the related expenditure is incurred. Any revenues received for which the related expenditures have not been incurred are recorded as deferred revenue.

ii) Administration

Revenue received for the administration of the Fund is recognized as such in the period in which it is received.

c) Project expenditures

Expenditure advances to projects are recorded as expenditures during the period in which the advance was made. If, at the completion or termination of a project, it is determined that there are excess monies which should be returned to the Fund, these recoveries are recorded as such during the period in which the project ends.

d) Fixed assets

In common with many non-profit organizations, fixed asset purchases are charged to expense in the year of acquisition. To maintain accountability for these purchases, corresponding entries are made to capitalize them on the balance sheet as an asset with an offsetting entry to equity in fixed assets. Consistent with this treatment, depreciation is not provided for in the accounts.

e) Donated goods and services

The Fund has chosen not to record the fair market value of goods and services provided without charge to it by various other provincial government departments. Saskatchewan Agriculture and Food was the major provider of such donated goods and services to the Fund. During the fiscal period some of the more significant donated goods and services to the Fund included:

- Δ office space
- Δ accounting services
- Δ computer services
- Δ employer's share of employee benefits
- Δ photocopying and postage
- Δ library services

2. Formation and Commencement of Operations

The Agriculture Development Fund was established by The Agriculture Development Fund Act which was assented to on July 17, 1989. The Fund commenced active operations as a Treasury Board Crown Corporation on October 1, 1989. Prior to October 1, 1989 the Fund had functioned as a division of Saskatchewan Agriculture and Food. Assets and liabilities accumulated while a division of Saskatchewan Agriculture and Food were contractually assumed by the Fund upon its incorporation.

3. Fixed Assets

Fixed assets carried in these financial statements are at cost and are comprised only of amounts incurred by the Fund since October 1, 1989. Fixed assets which were inherited by the Fund for no consideration on October 1, 1989 from Saskatchewan Agriculture and Food as outlined in note 2 have not been recorded in these financial statements as no record was maintained of the value of such fixed assets. Fixed assets acquired since October 1, 1989 are comprised of the following:

Furniture and equipment	$ 21,637
Computer hardware	128,377
Equity in fixed assets	$ 150,014

4. Accounts Payable

a) Related parties

Accounts payable at year end include amounts payable to various Government of Saskatchewan agencies, departments and Crown Corporations for goods and services provided to the Fund on normal terms and conditions.

b) Projects

Project liabilities are recorded when contractual conditions for payment such as submission of reports and invoices have been fulfilled.

5. Deferred Project Revenue

As explained in note 1 b), project revenue received in excess of the related project expenditures incurred during the period is deferred until the related expenditures are incurred. Deferred revenue at March 31, 1990 consists of the following:

	Amounts Provided	Expenditures Incurred	Deferred Project Revenue
Research, Development, Demonstration	$ 9,559,170	7,154,796	2,404,374
Economic and Regional Development Agreement	2,072,775	1,608,468	464,307
Economic and Regional Development Agreement - Irrigation	475,200	475,000	200
Commercialization	500,000	-	500,000
Total	$ 12,607,145	9,238,264	3,368,881

6. Operating Surplus

Due to the nature of the funding provided to the Fund by Saskatchewan Agriculture and Food, Treasury Board retains the right, at its discretion, to withdraw that portion of the funding represented by operating surplus. Management of the Fund is not aware at this time of any intent on the part of Treasury board to withdraw any or all of this amount.

7. Commitments

At March 31, 1990 the Fund had outstanding financial commitments to various projects under a variety of programs all of which were subject to appropriate funding being made available. Due to the uncertainty as to the continued availability of project funding and also, since certain payments are made only at the discretion of the Treasury Board, it is not possible to quantify future commitments beyond the 1991 fiscal year. Payments for which the Fund is contractually committed in 1991, which are in addition to those items recorded as liabilities on the balance sheet, are as follows:

Research, development and demonstration approved projects	$ 8,479,734
Economic and Regional Development Agreement	1,376,634
Canada - Saskatchewan Soil Conservation Agreement	2,771,135
AgWest Biotech Inc.	916,410
Saskatchewan Water Corporation Individual Irrigation Projects	1,000,000
Saskatchewan Water Corporation Irrigation Development Loan to be received in 1991 - first repayment	1,976,000
Saskatchewan Property Management Corporation - College of Agriculture building on the campus of the University of Saskatchewan	1,789,500
Total Commitments	$ 18,309,413

STATEMENT OF PROJECT REVENUE AND EXPENDITURES

SIX (6) MONTH PERIOD ENDED MARCH 31, 1990

SCHEDULE 1

	Research Development Demonstration	Economic and Regional Development Agreement	Economic and Regional Development Agreement Irrigation	Canada - Saskatchewan Soil Conservation Agreement	AgWest Biotech Inc.	Total
